Head over to ourContact pageand let us know.View more In this modern era, an android mobile can be seen in the hands of every individual, irrespective of their age or work. The advancement in communication and technology and lower costs is the reason behind it. Humans are not perfect, and so are their inventions. There are many problems or glitches associated with Android mobile phones and one of the riskiest of them is the loss of data. Mobile phones these days are not just a means of communication but are mini-computers in our pocket that contains a lot of important and irreplaceable data. Hence the safety of the data is of top importance. Mobile could be replaced, but the data it contains may not be! The data loss from an android phone can be due to several reasons like accidental deletion, corruption of files, hardware problems, software glitches, etc. But one doesn't need to worry much as these days, there are applications available to repair as well as recover the corrupt or lost files. Applications like Recoverit Data Recovery or Fonepaw can be used for this purpose. Let us have a look at some of the data recovery software and how to use them: Fonepaw is one of the widely used applications for the recovery of files from Android. The software allows the user to recover deleted messages, photos, audios, videos, etc. from an android device. Along with the recovery of files, Fonepaw also supports data transfer, decryption, and screen recording as well. Even though Fonepaw is widely used by many people and supports a great many handsets, it does not support a wide range of file formats or in-depth recovery of files. Also, Fonepaw does not support the bulk selection of files, i.e. the user has to manually select each file that needs to be recovered. Fonepaw can also be used on Apple devices, but only works with standard Apple applications. Part 2: Using Fonepaw To Recover Data From An Android Phone The first step is to download and install Fonepaw software. You can get the setup file from the official Fonepaw website. Step 1: Connect your Android mobile phone to your PC Before connecting your device to your desktop open Fonepaw and click on Android Data Recovery. Now connect your Android device and wait till it is detected by the software. Step 2: Device authorization Make sure that the USB debugging is ON your device. If not prompted you can do so from the Developer options in your Settings options of the device. Then tap OK on your Android Data Recovery window and then on your phone Step 3: Selecting the files to scan After your device is detected by the program, you can select the file types that need to be scanned and recovered. Select the required type of files and click Next. Step 4: Choosing the files and Recovery The scanning process may take some time. Once the process is over the files under the selected file types will be displayed on the window. You can select the required files and then tap Recover. The selected files will be recovered from the Android device to the computer. Part 3: Fonepaw Vs. Recoverit. Why Recoverit is the better choice! Even though Fonepaw is a good data recovery application, it is a bit outdated. Fonepaw does not provide the extensive features of other applications in the same market such as Recoverit Data Recovery provides. Recoverit Data Recovery is one of the top applications preferred by people all over the world for its fast recovery features and reliability. Also, the process of recovery of Fonepaw is a bit complicated compared to the 3 steps easy recovery of Recoverit Data Recovery. Recoverit Data Recovery promises a high data recovery rate and provides a variety of features like advanced video recovery and repair. They also support a large number of file formats for photos, audios, videos, documents, etc. Some of the features of Recoverit Data Recovery for Android are: Use of advanced scanning and recovery algorithm to recover all the data lost Can recover lost, emptied or deleted files Supports over 1000 file formats for photos, videos, documents, etc. Download | Win Download | Mac Recovery using Recoverit Data Recovery The recovery of files from the Android SD card can be done in three simple steps using the Recoverit Data Recovery application. Download and install the Recoverit Data Recovery on your desktop. If you are using a Mac you can download the Mac version of Recoverit Data Recovery and follow the similar steps. Step 1: Select the Recovery mode Open the Recoverit Data Recovery software on your desktop. Select your android device from the External Devices and tap Start Step 2: Scanning the device for files The scanning process will start once you press start. The SD card mounted on your phone will be scanned extensively and the results will be displayed once the scanning is over. Step 3: Preview and Recovery of files The scanned results will be displayed and you will be able to preview the files in order to select the ones needed to be recovered. Select the files and tap Recover. All the selected files will be recovered in no time. Make sure that you save all these recovered files to a safer location. The Recoverit Data Recovery supports only the recovery of the external SD card of an Android device. So you can either connect the SD card directly to the PC for recovery or you can connect the Android device mounted with the SD card. Conclusion In this era, the mobile phone has become an unavoidable part of our life, from communication to computing and watching movies. As the purpose becomes wider a large amount of data will be stored on our phones. There is a chance for these valuable data to get corrupted or deleted over time. Hence it is important that we use the best and most reliable apps available in the market like Recoverit Data Recovery for data retrieval. Download | Win Download | Mac FonePaw Android Data Recovery 3.9.0 Crack is a wonderful and amazing software that is helpful for users to recover the lost data from android devices.
